STENHØJ Piston compressors – high quality means low operating costs

STENHØJ piston compressors are the strongest and most reliable compressors in the world. For over 60 years STENHØJ has been manufacturing compressors with an uncompromising emphasis on quality. Every compressor that leaves our factory benefits from those many years of experience. Which is why you are guaranteed a longer working life – and thus reduced operating costs. And why careful consideration will lead you to choose a STENHØJ compressor.

STENHØJ piston compressor system, Type KA, horizontal installation

STENHØJ piston compressor systems are also available as dual compressor systems - type KD.

STENHØJ Piston compressors – developed to meet your needs

STENHØJ has developed a range of models to ensure there is a compressor that exactly fits your requirements. There are different control options, which lets you choose the most economical compressed-air solution in your unique situation.

Energy – optimising STENHØJ supplementary unit, type KC

STENHØJ compressors have a longer working life – which we support by a 15 year supply guarantee for all spare parts.

Fully automated operation:

The compressor is operated by a push – button that starts/stops the electric motor and aerates the compressor. Select this operating mode for varying air consumption.

Semi-automated operation:

The compressor is by a pressure regulator that relieves the compressor at max. operating pressure. Select this operating mode for constant air consumption.

STENHØJ Piston compressor system, type KA, vertical installation

We offer a wide variety of optional extras such as electronic water discharger, floater-controlled water discharger, connection hoses, vibration dampers, special – air filters, motor guard, solenoid valve, automatic star delta-switch, pressure switch, and economiser control.

Technical data*

STENHØJ has the user in mind

No matter which STENHØJ compressor you choose, you are guaranteed optimum safety and user-friendliness. A specially designed safety valve on all STENHØJ air receivers cylinders prevents explosion risks. This also guarantees that STENHØJ complies with the international standards for air receivers.

* For technical data, please see the attached datasheet.
